DETAILED ACTION

The claims have been amended and overcome the prior art rejection. Therefore, the search would be expanded to non-elected species such as an aliphatic dialdehyde compound and a new ground of rejection is cited herein in that claims 1-6, 9, 13 and 17 are read on this species.

Claims 1-5, 9, 13 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al.

The reference discloses a process for preparing phenolic resole resin comprising the steps of :

(a) reacting from about 0.05 to about 0.3 mole of a dialdehyde per mole of phenolic compound under acid conditions, and

(b) subsequently reacting the product of (a) with from about 0.4 mole to about 2.8 mole of formaldehyde (see col. 2, lines 54-59).

Note that the phenolic compounds have been disclosed at col. 4, lines 32-39.

Note also that the dialdehyde compounds have been disclosed at col. 2, lines 51-63), the acids have been disclosed at col. 5, lines 11-13.

Thus, each and every limitation of the claims is met by the reference.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson et al.

The reference discloses a process for preparing a phenolic resole resin, as stated above. The disclosure of the reference differs from the instant claim in that it does not disclose the claimed range temperature, of from about 120[°]-150[°]C.

However, the reference does disclose the temperature range of from about 95° 105°C, which is near to the claimed range temperature.

Therefore, it would have been obvious to one of ordinary skill in the art to raise the temperature from the reference within the limitation of the instant claims since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said use.
